KNEO Website

Go-Live Review & Improvement Plan

Site reviewed: kneo-website.vercel.app · Review date: 26 September 2026 · Prepared by: Mikey, KNEO Automation

1. Summary and verdict

Verdict: almost ready to go live. The site is ready once six must-fix items are closed, about half a day of work.

All 55 pages were reviewed. The copy is strong and consistent in tone, with no typos, placeholder text or broken pages found. The remaining problems are inconsistent facts (years of experience, ISO wording, address), a few over-strong claims, and the domain switch-over from vercel.app to kneo.in.

Area	Status
Copy quality and tone	Good
Factual consistency	Needs fixes (years, ISO, address, brand lists, counts)
Claims and superlatives	Several need softening or evidence
SEO basics (meta, OG, sitemap, robots, 404)	In place, but point to vercel.app
Legal pages	Missing dates and DPDP Act 2023 reference
Mobile, speed, contact form	Not verified remotely; test before launch

2. Must fix before go-live

These six items block launch. Everything else in this document can follow after go-live.

#	Issue	Where	Fix
1	Years of experience inconsistent: 23 vs 24+	Home, footer, FAQ say 23; About and all 6 industry pages say 24+	Use 23 everywhere (founded 2003)
2	"ISO 9001:2015 Certified Since 2003" is impossible; the 2015 standard did not exist in 2003	Footer badge; "since inception" on Contact	Use "ISO 9001:2015 Certified · Engineering since 2003" everywhere; fix "ISO9001" spelling on industry pages
3	Canonicals, OG image URLs, robots.txt and sitemap.xml point to kneo-website.vercel.app	Site-wide	Switch to kneo.in; add 301 redirects from old kneo.in URLs; noindex or redirect the vercel.app copy
4	Real OEM and customer logo images (BMW, Ford, VW, ZF, Hyundai and others) may imply endorsement	Home: OEM standards section and "Trusted on projects for..." strip	Confirm permission, or switch to text names only
5	Office address mismatch: "Office 502–504" vs "501–505" on letterhead	Contact page vs KNEO letterhead	Confirm the correct unit numbers and align both
6	Contact form not yet tested end to end	Contact page	Submit a test enquiry and confirm it reaches sales@

3. Page-by-page review

Priority: **High** = before launch, **Medium** = launch week, **Low** = polish.

3.1 Home

Finding	Recommended change	Priority
"Six problems we are asked about most" is followed by ten tiles	Change to "Ten problems..." or "The problems we are asked about most"	High
Brand list in "What we do" omits Delta and Yaskawa, which About and Services include	Use one master brand list across all pages	Medium
OEM and customer logo images	See must-fix #4	High

3.2 Industrial Automation

Finding	Recommended change	Priority
"40% less onsite time" is an unqualified claim	Add "typical, based on our projects" or link to the Virtual Commissioning page	Medium

3.3 MES Platform (overview + 6 modules)

The module pages (EYE, TRAIL, VITA, ADEPT, SPRINT) read well.

Finding	Recommended change	Priority
"Six modules. One platform. Complete visibility..." appears three times on the overview (menu, hero, body)	Keep it in one place, ideally the hero	Low
EYE OEE waterfall shows −18% / −16% / −6% with no context	Label the chart "Illustrative"	Medium

3.4 Products

Page	Finding	Recommended change	Priority
Auto Ballooning	"80% reduction in ballooning time" vs "4–6 h manual effort" (Drawing Inspection) vs "in minutes" (hub)	Make the three statements tell one story; keep evidence for the 80% ready for sales calls	Medium
PFMEA	"60% less engineering effort vs Excel"	Back it with a case example, or soften to "significantly less"	Medium
MAPP Vision	"Zero-defect standards" overpromises	Use "Consistent inspection on every part"	Medium

3.5 Services

Page	Finding	Recommended change	Priority
Virtual Commissioning	"0 collisions discovered on real hardware" is absolute	Use "Collisions found in simulation, not on site"	High
Onsite Commissioning	Two sub-cards both titled "Support"	Rename to "Remote support" and "Site visits"	Medium
Onsite Commissioning	"24/7 remote support" conflicts with Mon–Fri 9–6 hours on Contact	Add "for AMC customers", as the industry pages do	High
Services (general)	"Unmatched after-sales support" is a superlative	Use "After-sales support with named engineers"	Low
Expertise (footer only)	Overlaps heavily with Industrial Automation; "STEP 7 V15.1" looks dated	Merge into Industrial Automation, or remove version numbers	Low

Page	Finding	Recommended change	Priority
Electrical, PLC/SCADA, Turnkey, Ignition, Cycle Time, Retrofit	No issues found	None	—

3.6 Industries (hub + 6)

Finding	Recommended change	Priority
Hub says "Five industries, one pattern" directly under six industries	Change to "Six industries..."	High
All six industry pages say 24+ years	Change to 23 (must-fix #1)	High
"ISO9001" written without a space	Standardise to "ISO 9001:2015"	Medium

3.7 About

Finding	Recommended change	Priority
24+ years	Change to 23	High
Hero "The partner behind the world's smartest factories" is a large claim	Use something concrete, e.g. "The engineering partner behind connected factories in 30+ countries"	Medium

3.8 Insights and articles

Finding	Recommended change	Priority
Articles show dates (e.g. 19 June 2026) but the Insights listing does not	Show dates on the listing cards	Low
Four articles show "Insight" where others show a read time	Show read time on all articles	Low
No author names	Add "KNEO Engineering Team" or a named engineer	Medium

3.9 Contact, Careers, FAQ

Page	Finding	Recommended change	Priority
Contact	Good; address and ISO wording issues covered in must-fix list	See must-fix #2, #5, #6	High
FAQ	Good	None	—
Careers	Six open roles with no dates will look stale	Add "Updated Sept 2026" or reword to "Roles we regularly hire for"	Medium

3.10 Privacy and Terms

Finding	Recommended change	Priority
No "Effective date" or "Last updated" on either page	Add both	High
Privacy policy does not reference India's DPDP Act 2023	Add a DPDP section covering purpose, consent and rights	High
sales@ is the privacy contact	Name a grievance officer with a dedicated email	High
States no tracking cookies are used	Update if Google Analytics or similar is added at launch; add a cookie notice	Medium

3.11 Technical

Item	Status
robots.txt	Present; update domain at launch
sitemap.xml (60 URLs)	Present; update domain at launch
Meta titles and descriptions	In place on all pages
OG images	In place; update image URLs to kneo.in
404 handling	Unknown pages correctly return 404

4. Improvement plan (after launch)

These go beyond fixing errors. They make the site more credible, easier to find, and better at turning visitors into RFQs and MES demos.

#	Improvement	Why it matters	Timing
1	Keep one "master facts" sheet: years, address, ISO wording, brand list, country count, headline stats	Stops the inconsistencies in this review from coming back as pages are edited	Launch week
2	Build an evidence file for every number on the site (40%, 60%, 80%, 30+ countries)	Sales can defend claims; weak claims get softened before a customer challenges them	Month 1
3	Publish 3–5 case studies with measurable before/after results	The strongest proof for a B2B integrator; lets claims link to a real project	Months 1–3
4	Add structured data: Organization, LocalBusiness, FAQPage, Article	Richer Google results and better local search visibility	Month 1
5	Set up Google Search Console and analytics with a consent banner; submit sitemap	Tracks indexing, rankings and which pages bring enquiries	Launch week
6	Add a clear call to action on every page (Request a quote / Book an MES demo)	Service and product pages should end with a next step, not a dead end	Month 1
7	Let the RFQ form accept file uploads (specs, drawings, I/O lists)	Industrial RFQs usually come with documents; fewer back-and-forth emails	Month 1
8	Show partner and certification badges with links (e.g. Inductive Automation Integrator, ISO 9001:2015)	Third-party proof carries more weight than self-description	Month 1
9	Keep Insights active: one article a month, with author and date	Freshness signals for SEO and shows current expertise	Ongoing
10	Run Lighthouse on mobile and desktop; target 90+ for performance and accessibility	Speed and accessibility affect rankings and first impressions	Launch week
11	Review the customer names strip annually	Keeps references current and approved	Yearly

5. Pre-launch QA checklist

These could not be checked remotely and need a hands-on pass on a real phone and desktop before the switch.

☐ Every page viewed on a phone (Android and iPhone): layout, menu, tables, images
☐ Every page viewed on desktop in Chrome, Edge and Safari
☐ Contact form submitted; enquiry received at sales@; confirmation message shown
☐ Deployment map loads and is usable on mobile
☐ Page speed checked (Lighthouse or PageSpeed Insights)
☐ All internal links and menu items open the right page

- ☐ Canonicals, OG tags, robots.txt and sitemap.xml use kneo.in
- ☐ 301 redirects from old kneo.in URLs tested
- ☐ vercel.app copy set to noindex or redirected
- ☐ Sitemap submitted in Google Search Console
- ☐ Social share preview checked (LinkedIn, WhatsApp)
